1. OpenGym

- 1. Installation

1. Installation

We will now look at all the environment variables of the workout application

Now if you want to have an admin page you will need to set this with the following environment variable

ADMIN_UIDS=youradminname, anotheradmin

```
# ── Admin dashboard & invite-only signup (optional) ──────────────────────
# Both off by default — a fresh instance has open signup and no admin.
#
# Make yourself an admin: register your own passkey profile first, find your
# user id in ./data/db.json ("users"[].id), then list it here (comma-separated
# for several admins). Admins get an "Admin dashboard" link in Settings to see
# users, disable accounts, generate invite codes and view workout history.
#
```
