

1. Proxmox Base Operating System

In this book we will install Proxmox, basically the base operating system that we recommend everyone to install. This will be the operating system on which all other application deployment operating systems can be build on top of.

- [1. But Why](#)

1. But Why

Why do we recommend Proxmox as our base operating system for every home lab deployment ? Well to understand if you are not familiar with Proxmox it is not just a regular operating system as Ubuntu, Debian, Home Assistant, ZimaOS etcetera. No it is called a hypervisor. So what is that then ? Well in the most
