

1.5.24 Dawarich

Dawarich is a self-hostable web app designed to replace Google Timeline (aka Google Location History). It enables you to:

- Track your location history.
 - Visualize your data on an interactive map.
 - Create trips and analyze your travel history.
 - Share your location with family members.
 - Integrate with photo management apps like Immich and Photoprism to visualize geotagged photos.
 - Import your location history from Google Maps Timeline, OwnTracks, GPX, GeoJSON and some other sources
 - Explore statistics like the number of countries and cities visited, total distance traveled, and more!
 - Share your location with family members.

Owntracks/Traccar clients

https://tracks.rfeyn.org/api/v1/owntracks/points?api_key=18349285cbc1dcb8e68427175509225e3a244c9c6791f7bc8a9affe887f46f5f

Sadly enough they all require google play services to work

1. Installation

This app is again extremely simple to install.

What is important is that you set the IP of your DockerVM and the domain name you want to use to access the Dawarich instance in the `APPLICATION_HOSTS=` environment variable. Otherwise you won't be able to connect to it from any other machine then local host !
