

8. Streamable Videos

Streamable videos can be activated inside the desktop application for videos bigger than 1 minute. This way, your laptop/pc can do the heavy lifting instead of your phone to process the video. In this way, a user does not need to download the whole file to their phone, but can watch it instantly via streaming !

1. Enter you Ente Desktop application

2. Go to Hamburger menu -> Preferences -> Toggle on streamable videos.

3. Then underneath it as you can see it will show how much of your videos have been processed on your laptop.

4. Perfect! Now you do need to make sure that your desktop app is running in the background to create the streamable videos for you.
